Trommel Screen Machine

Abstract

The invention refers to a trommel screen machine, comprising at least one revolving screening drum (2), at least one drive (3) for the screening drum, a feeding hopper (4) as well as at least one collecting device, respectively transport device (6), for collecting, respectively transporting the screened good.

The invention is characterised by the fact that in front of and/or on the trommel screen machine (1) at least one disc screen (5) is arranged which screens a defined grain, in particular oversized particles.
